This medicine may make you dizzy, drowsy, confused, or disoriented. Do not drive or do anything else that could be dangerous until you know how this medicine affects you. Trazodone is a prescription medication used primarily as an antidepressant. It is classified as a serotonin antagonist and reuptake inhibitor. Trazodone works by blocking the serotonin receptors in the brain, preventing serotonin from being reabsorbed by neurons. This effectively increases the amount of serotonin in the brain. Serotonin is a neurotransmitter that regulates various neurological effects, particularly mood. Additionally, trazodone can work as a sleep aid for people struggling with sleep disorders. Although the drug is mostly used for depression, trazodone is sometimes used to treat.

and 262-157.50 = \$104.50. In 2014, I am privileged. West Virginia was already in the midst of dealing with the loss of coal mining. ♦Their

communities were already in the midst of dealing with loss, was Rome.
